

Standby Systems, Inc. has been serving the energy industry for over 40 years, providing a host of equipment and services for energy pipelines, natural gas utilities and industrial / commercial gas consumers.

Standby provides several end-user products and services in the area of natural gas utilization and custom process fabrications. We maintain expertise in piping systems, which are often integrated with computer based control systems, to provide complete solutions for our clients needs.

In addition to propane-air peakshaving systems, Standby supplies the natural gas industry with gas metering and regulating stations, gas burner systems, and a variety of unique products that improve capacity on gas distribution systems.

Standby maintains active memberships in several key industry groups where we contribute to research and standards development.

Our multi-disciplined team of engineers, technicians and support personnel can handle all aspects of our projects. Together they bring broad experience, depth in resources and strong industry relationships. A commitment to continuous improvement in technologies, quality and safety is evident in everything we do.

Let Standby Systems provide you with the right solution.
